UPDATE

Winter 2020

BATEMAN

KEEPING THE WHEELS TURNING

Welcome

Welcome to the latest issue of our Bateman Update.

Our Team Bateman demonstration team are still busy putting our machines through their paces on farms throughout the UK. If you would like us to visit your farm please get in touch.

We recently visited Alan Grant's farm in Scotland, you can read his thoughts on running a Bateman RB35 on page 4.

Pinpoint II PWM is designed to help you save chemical by increasing accuracy, our simple graphic on page 6 explains how.

We've been delighted by the reaction of customers old and new to our recently launched finance packages, which you can read about on page 8.

On behalf of the Bateman team and myself, our very best wishes to you and your families for Christmas and 2021.

Jason Bateman
CEO

View from the cab

Alan Grant grows 170ha of winter barley, 100ha each of oilseed rape, oats and winter wheat and 630ha of spring barley in Skillymarno, near Fraserburgh. He runs an RB35.

You're always pretty successful in competitions; what do you put your success down to?

"I would say experience, a good eye and my Bateman. With 40 years of spraying under my belt, I wouldn't consider any other make of sprayer."

What do you like about your new RB35?

"It has great ground clearance, manoeuvrability and weight distribution with top end technology. I also like the Bateman Boom Levelling which is very good, the visibility I get with the new cab and the wheel track adjustment read out being in the cab."

You've been a valued customer of ours for a number of years and this would be your third Bateman Sprayer that we know of?

"Aye, my third since 2004. It's also my fert spreader, with the accurate dribble bars."

We've spoken to a fellow Bateman owner and neighbour of yours and we were discussing COVID-19. We touched upon parts and service, how would you rate us, out of interest?

“Outstanding! The office is always very helpful on the phone and the parts tend to arrive the next day, even all the way from Devon and even with all of the problems with the lockdown side of things. We have used your service engineers and we get great support locally from CT Scott when we need it. So great machine, great support.”

How about nozzles – what’s your nozzle of choice these days?

“With this new RB35, I am a convert to Lechler! We’ve fitted Lechler IDTA 03 - 120 Ceramic. Typically, we’ll spray 135L/ha at 12 kmh.”

Finally, how would you sum up your Bateman?

“Looking after 1100ha of crops from pre-emergence to harvest I need the year-round reliability that I get from my Bateman sprayer. We opted for the ‘Accurate’ dribble bars, which affords us the additional benefit of using the Bateman as our fertiliser spreader. Our RB35 has great ground clearance, manoeuvrability and weight distribution; I wouldn’t consider any other make of sprayer.”

Use less chemical

PinPoint II utilises Blended Pulse™ PWM
reduces chemical usage by increasing

Individual Nozzle Control

Spray where you need to, not where you don't. Nozzles turn on and off one-by-one to minimize overspray and get the most out of your spray tank.

Constant Pressure

Speed up or slow down without changing pressure. Set the pressure where you want it and spray.

Constant Droplet S

The right droplet size makes the best use of the chemical. PinPoint II allows you to define a constant droplet size to match the conditions you're facing.

1 with PinPoint II

accurately
consistent
to match
as you are

Realtime Diagnostics
Nozzle valve status is displayed on the monitor and gives you the information you need to do your job with confidence.

Turn Compensation
Spray on contours or around obstacles with the right volume across the whole boom. Minimize overdosing on the inside or underdosing on the outside.

Your Bateman, your way

We understand the nature of both growing and contracting businesses and we listen to our customers. The need to know your costs and the ability to maximise profit are perhaps more important than ever. This is why we have introduced Bateman Finance.

What this means for you

- The ability to budget and track your operating costs
- Designed specifically for our Bateman customers
- Flexible contract hire and hire purchase options
- An in-house finance manager and a simple seamless process
- Competitive rates

Five minutes with Scott Dunham

Scott works out of our HQ in Devon - here's what he has to say about his role at Bateman Sprayers

My role at Bateman is:

Technical Sales Manager [South West]

A typical day for me at Bateman

involves: Talking to customers, sorting demos and occasionally driving the lorry.

The most enjoyable aspect of my current role is: Meeting new people, and showing them what a Bateman can do.

I would say life at Bateman is: Very fast paced, no two days are ever the same.

Before I joined Bateman I was: Tractor / Forager driver on a dairy farm.

If I have time to myself I enjoy: Spending time with my family / shooting.

The best advice I have ever been given is: Measure twice, cut once, take your time and do a job properly!

For your work.
For your leisure.

We've created the Bateman Christmas collection to see the full range visit batemansprayers.com/teambateman

Pre-owned Bateman Sprayers.
